EDUCATION

Harvard University

Bachelor of Science: Mechanical Engineering, GPA: 4.0

Relevant Coursework: Computer-Aided Machine Design, Mechanics of Solids, Mechanical Systems, Thermodynamics, Fluid Mechanics, Electrical Engineering, Computing with Python

Cambridge, MA

May 2028

ENGINEERING EXPERIENCE

Fiskars Group

Design Engineering Intern

- Evaluated blade geometry, material, coating, and performance across 6 competitor scissors, identifying 2 blade-design improvements
- Planned and executed product validation against performance specifications
- Developed DFMEA, test requests, and product specifications in Windchill OnePLM
- Built a manufacturing cost estimator using supplier RFQs and injection molding parameters

Middleton, WI

June - August 2026

Harvard Bertoldi Group

Undergraduate Researcher, Harvard 2025 PRISE Fellow

- Designed and validated custom test rigs, integrating CAD/3D-printed parts, sensors, electronics, and MATLAB
- Integrated flowmeter and differential-pressure sensors for an air-permeability tester; designed mechanical interfaces for 80/20, threaded hardware, and tubing
- Designed a stepper-motor rotational fixture and integrated motion control with wind-tunnel DAQ
- Developed a Python script to analyze surface height data from Instron tensile testing and laser profilometry

Cambridge, MA

January 2025 - present

Harvard Engineers Without Borders

Revit Technical Lead, Aug 2025 and Aug 2026 Travel Team Member

- Collaborated with local partners to improve water systems in the Dominican Republic and Guatemala
- Conducted household ethnographic interviews to understand community needs
- Revised Revit drawings for water storage tanks based on professional feedback
- Structured clear documentation for on-site trips using Microsoft Office tools

Cambridge, MA

January 2025 - present

TECHNICAL PROJECTS

Harvard Undergraduate Solar Boat Team

Co-Mechanical Lead

- Lead team members to design propeller, outboard, steering, and cooling systems for a solar-powered boat to race in 2027 Solar Splash and ASNE PEP Competitions

Cambridge, MA

June 2026 - present

Wavelength - Conflux Collective Art Installation

Co-Project Lead

- Led team of 5 students to ideate and build an interactive art installation of a kinetic sculpture
- Prototyped a kinetic tree of 6 3D-printed telescoping cylinders powered by a scissor lift
- Integrated dual microphones, Raspberry Pi, and motor to translate real-time audio input into mechanical motion
- Designed testing to improve user-friendliness of interactive feedback

Cambridge, MA

September 2025 - May 2026

Claw Robot - Mechanical Engineering Class Project

Team Member

- Created robot to traverse 15 and 30 degree inclines and move around hockey pucks, dog toys, and blocks
- Designed drivetrain and integrated full mechanical assembly in SolidWorks
- Calculated torque, motor, COM constraints

Cambridge, MA

January - May 2025

SKILLS

Technical: SolidWorks, Onshape, COMSOL/FEA, Revit, Python, MATLAB, Arduino, Raspberry Pi

Laboratory: Instron, CNC machining, manual mill/lathe, 3D printing, laser cutting, laser profilometry

Design: DFMEA, injection molding (basic), GD&T (basic)

Language: Chinese (fluent), Spanish (fluent)
