EDUCATION

Harvard University

Bachelor of Science: Mechanical Engineering

Cambridge, MA

May 2028

Relevant Coursework: Computer-Aided Machine Design, Mechanics of Solids, Mechanical Systems, Thermodynamics, Fluid Mechanics, Electrical Engineering, Computing with Python

EXPERIENCE

Fiskars Group

Middleton, WI

Design Engineering Intern

June - August 2026

- Completed standardized testing for Michaels auditing and testing of products for supplier validation
- Analyzed 6 competitor scissors to implement improvements for blade specifications
- Wrote DFMEA, test request, and product specification documents using Windchill OnePLM

Harvard Bertoldi Group

Cambridge, MA

Undergraduate Researcher, Harvard 2025 PRISE Fellow

January 2025 - present

- Designed custom test rigs, including an air permeability tester and a motorized rotational fixture, integrating 3D-printed parts, sensors, electronics, and MATLAB from concept to validation
- Conducted Instron tensile testing and laser profilometry
- Developed a Python script to automate surface height and optical flow analysis

Harvard Engineers Without Borders

Cambridge, MA

Revit Technical Lead, Aug 2025 and Aug 2026 Travel Team Member

January 2025 - present

- Collaborated with professionals and local partners to assess and improve gravity-fed water systems for communities in the Dominican Republic and in Guatemala
- Revised drawings and specifications for water storage tanks based on professional feedback
- Contacted suppliers to source pumps meeting required specifications
- Collected and analyzed flow rate and water quality data on-site
- Structured clear documentation and scheduling for weeklong on-site trips using Microsoft Office tools

PROJECTS

Wavelength - Conflux Collective Art Installation

Cambridge, MA

Co-Project Lead

September 2025 - May 2026

- Led team of 5 students to ideate and build an interactive art installation that incorporates singing from two people to move a kinetic sculpture of a tree and flowers
- Prototyped a kinetic tree of 6 telescoping cylinders powered by a scissor lift, calculating geometry constraints and iterating 3D-printed designs
- Integrated electronics to control motor speed with a Raspberry Pi based on singing from two microphones
- Designed testing to improve user-friendliness of interactive feedback

Claw Robot - Mechanical Engineering Class Project

Cambridge, MA

Team Member

January - May 2025

- Created robot to traverse 15 and 30 degree inclines and move around hockey pucks, dog toys, and blocks
- Managed project tasks and reviewed all designs
- Designed drivetrain and assembled final robot CAD
- Calculated torque, motor, COM constraints
- Manufactured and assembled gearbox, arm, and claw components

SKILLS

Technical: SolidWorks, COMSOL, Revit, Python, MATLAB, Arduino IDE, Adobe Creative Suite, Microsoft Office

Laboratory: Instron, CNC & manual mill, manual lathe, 3D printer, laser cutter

Language: Chinese, Spanish
